[ACS reduces pricing for Lattice Etch]

Since ACS began producing Lattice Etch in 2007 there has been a very steady increase in sales volume. This has allowed ACS to negotiate with its raw material vendors for price reductions. This savings is being passed along to ACS customers with price reductions for Lattice Etch ranging from 20 % to 50 % (dependent upon volume ordered).

Furthermore, ACS projects that at the very least it will be able to hold prices steady over the next three years and perhaps even offer further reductions in pricing.
